I've already looked at other similar questions such as this one and several that I found by searching google, however, none of them have the same problem, and no one has a resolution. My problem occurs when I try to install/uninstall the app from Android Studio with this command `android install-multiple -r -d -a`. Also I've noticed that when I try to uninstall the app from the playstore, Android Studio appears to tell me that it is not installed, however it is still under the app icon in my applications area. I hope someone can help me and thank you for your time. A: I actually found the solution to my problem and although I'm not sure if it's the most ethical approach and I would love to have a discussion about the moral implications of my solution, however I've already done it, and if someone ever comes across this question in the future, they can use the following command in the terminal. `adb uninstall com.helioside.fundamentos.fundamentos`. And it will remove the app from the user's device and from the playstore. A computer system of the aforementioned type can be used for monitoring or recording various items of information and/or for controlling various functions of the computer system or a device connected to the computer system. In that case, the computer system is connected to the item or function to be controlled, so that the computer system receives data from the connected item or function and/or sends control commands for controlling the connected item or function. The control commands are sent to the connected item or function by way of a communication interface, generally called a port. A computer system of the aforementioned type can be implemented as a single piece of hardware. The hardware can be housed in a single housing. However, it is also possible to implement the computer system as a distributed system. This means that the processing or the control functions are distributed among different units and/or computers. One example of a distributed system is a network of distributed computers. Distributed systems are required in many applications, particularly in many of the applications that operate according to the client-server principle. In general, a client-server computer system has a client computer that can be used by the user of the computer system for requesting data or for control. A server computer or units of the computer system can provide the requested data or perform the requested control functions. In the case of a client-server computer system, the tasks
